Homes Are Only Getting Smarter

Estimated number of households worldwide with the following smart devices (in millions)

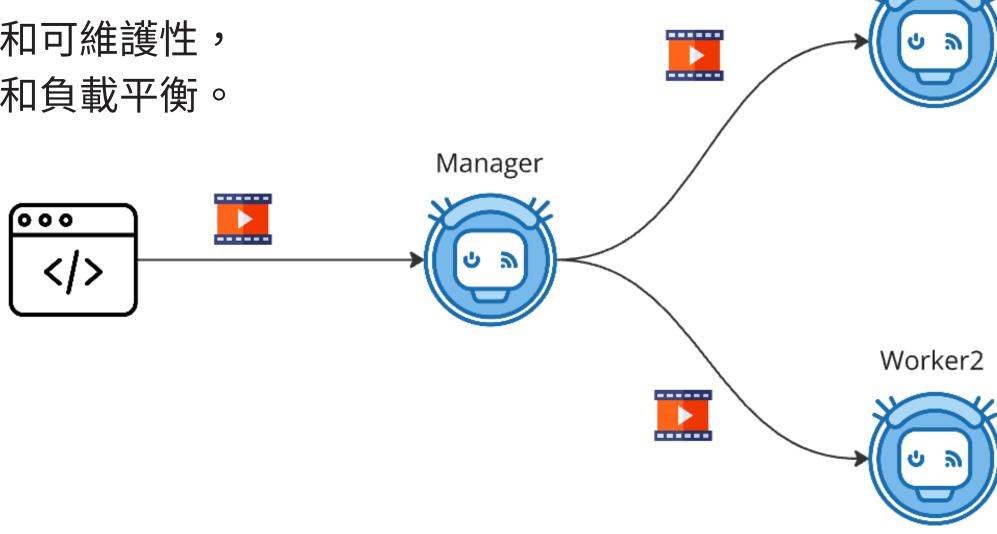

簡介

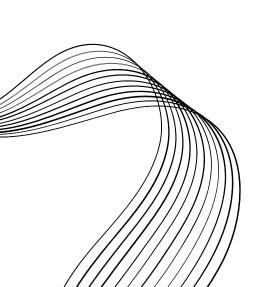

本研究提出了一套基於邊緣運算的計算資源管理系統,利用微服務架構,專門針對家庭多媒體數據的處理需求。

透過在低成本、低功耗的樹莓派上部署的數個程式。

使用容器化技術讓此系統更有可擴性和可維護性,並著重於資源受限環境中的數據處理和負載平衡。

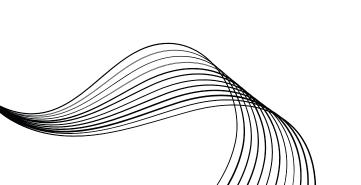

Worker1

簡介

Device	Model	CPU	Memory	Storage	os
Master	Raspberry Pi 5 Model B Rev 1.0	4x Cortex- A76 @ 2.4GHz	7.8Gi Total	57G Total	Debian 12 (bookworm)
Worker1	Raspberry Pi 4 Model B Rev 1.2	4x Cortex- A72 @ 1.5GHz	1.8Gi Total	29G Total	Debian 12 (bookworm)
Worker2	Raspberry Pi 4 Model B Rev 1.4	4x Cortex- A72 @ 1.5GHz	3.7Gi Total	29G Total	Debian 12 (bookworm)
